Dear Recruitment Team,

I am writing to apply for a Lead QA Engineer / SDET role. I bring 9 years of experience in web, API, and mobile test automation, and I currently work as a Lead QA Engineer at Synechron for clients in the banking and insurance domain.

For TransAmerica, I built an API automation framework from scratch using Java, REST Assured, and Cucumber (BDD), with JaCoCo code coverage and performance testing (load, stress, and endurance). I set up parameterized Jenkins jobs with automated email reports and integrated the framework with qTest. Using Kiro agentic AI, I increased my coding productivity by up to 60%.

Earlier, at Vegrow, I built a Selenium WebDriver framework that reduced manual effort by 50%, improved CI/CD efficiency by 40%, and cut recurring defects by 40% through RCA. I have also coached and guided QA teams of up to four engineers.

Highlights of my expertise include:

Java, Python, Selenium, Playwright, Appium, REST Assured, Postman, TestNG, Maven, Cucumber (BDD), POM, Jenkins, GitHub Actions, Docker, qTest, and JIRA.

I would welcome the chance to discuss how I can strengthen your quality engineering and help your team release with confidence.

Thank you for your time and consideration.

With kind regards,

Nitin Dixit
